NEXUS Module 2 - Security & Guardrail Layer

Objective
Build the deterministic security layer before any agent or executor.

Components
- guardrails.py: evaluate ActionPlan and allow/block/confirm.
- permissions.py: Owner/Admin/Guest roles.
- policies.py: denylist, allowlist, confirmation rules.
- audit.py: structured audit logging.
- rate_limiter.py: action limits per minute.
- confirmation.py: human approval workflow.
- models.py: policy models and decisions.

Features
Whitelisted actions, blocked packages, confirmation for sensitive actions, permission profiles, audit logs, deterministic decisions, integration with the GuardrailEngine protocol from Module 1, and unit tests.
